Introduction.....	1
List of Stations.....	2-7
Summary of Parish Rainfall for the year 1950	8-9
Monthly Weather Reports January-December, 1950	10-69

INTRODUCTION

The steadily increasing amount of work which has to be devoted to the provision of meteorological services for aviation has resulted in considerable delay in the preparation of the monthly issues of the Jamaica Weather Report, and an endeavour is now being made to bring the Report up to date and to ensure publication as soon as possible after the data for the month have been received. Certain modifications have been made in the format of the Report, mainly with a view to simplifying its preparation and reducing the amount of printing required. Opportunity has also been taken to introduce this annual title page and list of stations, giving the position of all stations as accurately as is known in the Meteorological Service.

Meteorological services in Jamaica are now maintained by the British Caribbean Meteorological Service, a Colonial Meteorological Service formed in 1951 under the joint control of all the Colonies in the British Caribbean area. The headquarters offices of the Director of the Service are in Port of Spain, Trinidad, and the divisional headquarters of the Jamaica Division remain at Palisadoes Airport, Kingston.

The list of Stations has been compiled largely for the benefit of those not intimately acquainted with the island, and incorporates the most recent information available. It will be appreciated if any errors can be notified to the Meteorologist-in-Charge, under whose supervision the Report is prepared and issued.

The standard of time used is Jamaica Standard Time, also known as Eastern Standard Time, which is 5 hours slow on Greenwich Mean Time. The times of observation at the climatological stations are 07h and 15h, but the synoptic stations at Morant Point Lighthouse, Negril Point Lighthouse and Palisadoes Airport take observations at 07h, 13h and 19h. Observations are taken every hour at Palisadoes, but are not published in this Report.

The exposure of all instruments is approximately standard. Atmospheric pressure is reduced to Mean Sea Level. Campbell-Stokes sunshine recorders are used. It will be noted that cloud amount is now stated in "oktas", an okta being one-eighth of the sky, wind in knots and pressure in millibars, 1000 millibars being equal to a pressure of 29.53 inches of mercury under conditions of standard temperature and gravity.

The monthly rainfall sections contain all the stations which send in their returns to the Meteorological Service. Rainfall is measured at or near 07h and is regarded as having fallen on the previous day. A "day of rain" is a day on which 0.01 inch or more of rain falls.

The mean monthly rainfall for each Parish included in the Summary of Parish Rainfall is obtained, as explained in the January 1946 Report and subsequently, from selected stations, while the Island Rainfall is taken as the mean of all the Parishes. The "average" rainfall used here is that for the 25-year period 1925-1949 employed in previous years.

The Meteorological Service is indebted to all the various observers, both official and voluntary, who regularly maintain such a high standard of observing and who send in their returns. Without their assistance it would not be possible to maintain this series of valuable and informative Reports.

Meteorological Office,
Palisadoes,
May, 1954.

BRITISH CARIBBEAN METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

JANUARY, 1950

The Weather of Kingston:

The month was generally fair with light winds and scattered showers with the exception of short periods around the 1st of the month and the 27th, when the weather was cloudy with moderate winds and more general showers.

The mean and extreme temperatures for the month varied only very slightly from the normal and humidities were 2-4% below the seasonal average.

Rainfall of Jamaica:

The extreme west of the Island was very dry with falls of only half the normal amount. The remaining areas had good rains, and Eastern Parishes and most of the Northern Parishes had 50% above the usual rainfall.

The highest falls occurred in Portland, where very few places received less than 10 inches during the month.

BRITISH CARIBBEAN METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

FEBRUARY, 1950

The Weather of Kingston:

Continuing generally fair with occasional cloudy periods and local showers. Appreciable rain fell in the city on 5-6 days during the month giving a total of 0.66 inches.

Temperatures were nearly 2° F. lower than the average with cooler conditions both day and night.

The Rainfall of Jamaica:

The Island mean was 45% in excess of the normal for February. The north-eastern quarter of the Island was extremely wet with St. Mary, Portland and St. Thomas having over twice the seasonal average. The south-western Parishes were very dry with Westmoreland having only 23% of the normal.

BRITISH CARIBBEAN METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

MARCH, 1950

The Weather of Kingston:

Fine or fair most of the month but occasional fair to cloudy days with light showers. Less than one tenth of an inch of rain fell in the city, spread over six days.

The average temperature in Kingston was 0.6° F. below the average for March, both days and nights being slightly cooler than the normal.

Rainfall of Jamaica:

In contrast to the first two months of the year, March was particularly dry with only 56% of the usual rainfall. Only two Parishes, Hanover and St. Thomas, had normal falls while St. Andrew and Trelawny had very low averages of less than one inch.

BRITISH CARIBBEAN METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

APRIL, 1950

The Weather of Kingston:

Cloudy early in the month with occasional light showers becoming generally fair or fine apart from heavy thundery showers on the 14th and 27th.

Temperatures were again slightly below average in the city.

Rainfall of Jamaica:

The Island mean of 5.17 inches was only 5% below the normal rainfall for April. Portland and Manchester had the highest percentage averages, being 20-25% above the normal while many of the remaining parishes had 20-25% deficiencies.

BRITISH CARIBBEAN METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

MAY, 1950

The Weather of Kingston:

Fair or fine most of the month but occasional cloudy days with light showers.

The mean temperatures in the city varied only very slightly from the normal values, but the maximum of 92.6°F on 31st was the highest recorded in May since 1942 and the minimum of 67.0°F. on 12th was the lowest in May since 1930.

Rainfall of Jamaica:

Usually, throughout the Island, the month of May is considered as one of the rainy months but this year, with an Island mean of only 67% of the normal rainfall, clearly shows the lack of any general rain.

The south-eastern Parishes were very dry with conditions becoming progressively better westwards and almost normal rainfall fell in the Parishes of St. Elizabeth and Westmoreland.

BRITISH CARIBBEAN METEOROLOGICAL SERVICE
JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

JUNE, 1950

The Weather of Kingston:

Mainly fair or fine but generally cloudy with heavy thundery showers on 4th, 7th and 13th, when most of the monthly total of rainfall (1.45 inches) fell in the city.

The average temperature in Kingston was 0.7° F. below the average for June. Both days and nights were slightly cooler than the normal.

Rainfall of Jamaica:

The Island mean of 6.33 inches was slightly below the 25-year normal. The western Parishes had amounts considerably in excess whereas most of the eastern Parishes were much drier than normal. The wettest parish was Westmoreland, where most places had half as much again of the usual rainfall.

BRITISH CARIBBEAN METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

JULY, 1950

The Weather of Kingston:

Fair or fine apart from occasional cloudy periods with thundery showers, heavy at times, especially around the 7th, 14th and 21st of the month. Strong winds with heavy squalls were experienced on the 10th and 11th.

Baifall of Jamaica:

The general average for the northern Parishes was 11% above normal but the Southern Parishes were considerably below the normal.

Portland, Hanover and St. Mary were the wettest Parishes with rainfall considerably in excess of the average. Clarendon was the driest parish with only one-third of the usual rainfall.

BRITISH CARIBBEAN METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

AUGUST, 1950

The Weather of Kingston:

Generally fine for the first half of the month apart from thundery showers, mainly over the mountains. Fair to cloudy with heavy thundery showers later in the month. Measurable rain fell on 15 days.

Rainfall of Jamaica:

The heaviest rains during August fell in the Southern Parishes while in the north it was relatively dry. The resultant average for the whole Island was a little in excess of normal.

The highest monthly total was recorded at New Market (Westmoreland) where 30.12 inches of rain fell in 21 days.

BRITISH CARIBBEAN METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

SEPTEMBER, 1950

The Weather of Kingston:

Dull, rainy periods occurred early in the month and from 20th to 23rd. The remainder of the month was mainly fair or fine but with occasional thundery showers.

Rainfall of Jamaica:

Portland and St. Ann experienced a comparatively dry month, but the rest of the Island had good rains, the heaviest falls occurring chiefly in the south. Westmoreland, Manchester and St. Thomas all averaged more than 10 inches. Among the highest monthly totals, Williamsfield with 26.17 inches and Darliston with 24.33 inches were the most noteworthy.

BRITISH CARIBBEAN METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

OCTOBER, 1950

The Weather of Kingston:

The weather was dull and rainy during the first 4 days of the month and again from 13th to 18th. The remainder of the month was fair or fine with occasional thundery showers.

Rainfall of Jamaica:

Heavy rains occurred over the whole Island due to the close proximity of a small hurricane, which formed 100 miles east of Swan Island on the 14th and developed rapidly as it moved east north eastwards, passing about 60 miles NW of Negril Point on the night of 15th/16th. The rains were particularly heavy in Southern and Western Parishes where flood damage was estimated at £250,000. The full force of the hurricane winds did not extend far enough south to affect Jamaica, the highest wind reported was 69 m.p.h. at Negril Point: Palisadoes recorded 55 m.p.h.

BRITISH CARIBBEAN METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

NOVEMBER, 1950

The Weather of Kingston:

Generally fair with occasional cloudy days. Heavy thundery showers occurred on 6th and 25th.

Rainfall of Jamaica:

The mean Parish rainfall was about normal for the time of the year but, with the early onset of weak northerns, most of the rainfall fell in exposed western, northern and eastern districts, where up to 30% in excess of normal was recorded. Elsewhere falls were well below the average figures.

BRITISH CARIBBEAN METEOROLOGICAL SERVICE

JAMAICA WEATHER REPORT

MONTHLY SUMMARY OF OBSERVATIONS

DECEMBER, 1950

The Weather of Kingston:

Fine or fair most of the month with light showers. Cloudy from 17th to 19th with occasional thundery showers.

Rainfall of Jamaica:

The rainfall was generally well above average, with frequent bursts of cold air (northerns) moving south from the American Continent across the Island and giving cool, wet weather on the North Coast and mountainous districts inland. Portland, St. Thomas and Manchester had about twice the usual rainfall.
